Outline

- Co-design in China
 - Background
 - HPC in China
 - Co-design toward 100 Peta Machines
- Post-petaflops Era in China
 - Chinese Academy of Sciences
 - NSFC
 - MOST
 - Sunway Bluelight Supercomputer

Background

中国科学院
计算机网络信息中心
Computer Network Information Center,
Chinese Academy of Sciences

Background

- “**The free lunch is over**”: CPU performance is no longer boosted by clock speed, but on-chip parallelism. Application software can NOT enjoy regular performance gains from CPU manufactures.
 - **Herb Sutter**, secretary and convener of the ISO C++ standards committee, Microsoft lead software architect
- “**Everything goes parallel**” is changing the thinking and practice of computational science and engineering.

Supercomputing Center of Chinese Academy of Sciences

HPC in China: the moment

- **Hardware's performance: high**
 - Tianhe-1A (No.2 on TOP500)
 - Nebulae (No.4 on TOP500)
- **Applications' scale: low**

Tractors crawl on highway

Chinese Academy of Sciences

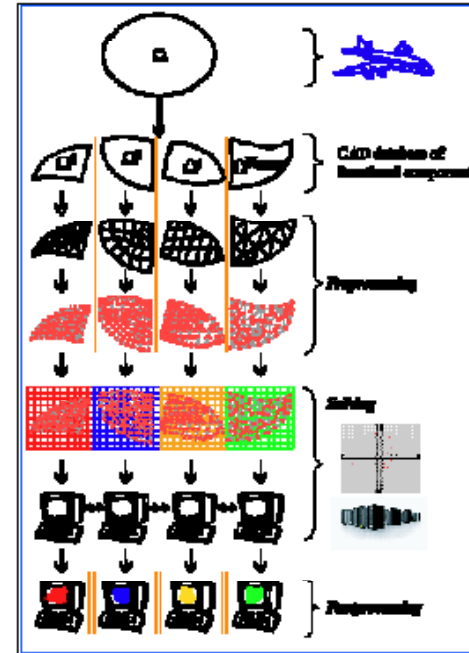

Co-Design Strategies

- Customized high performance computer for specific application
- Analysis of Computational Characteristics of Applications
 - CPU – Computing intensive
 - Memory – Memory limited
 - Storage – I/O intensive
 - Network – Communication intensive
- Interaction between vendors and software developers

Co-Design: Case Study

(a) Traditional parallel FEM (b) Head-to-toe fully parallel pGFEM

• **Head-to-toe parallel**

Co-design new algorithms on many-cores

*Rong Tian, Institute of Computing Technology, CAS

Co-Design toward 100 Petaflops Supercomputer

- 863 project (FY 2011~2015) by MOST
 - Hardware
 - ✓ two 100 Petaflops supercomputers by 2015
 - Numerical Frame
 - ✓ Structural mesh, non-structural mesh, non-mesh geometry and finite element method
 - ✓ Scalable up to ~ 900,000 CPU/cores
 - ✓ Parallel efficiency ~ 30%
 - ✓ budget: 20 Million in RMB

中国科学院超级计算中心
Supercomputing Center of Chinese Academy of Sciences

➤ Eight strategic applications

Software system will be developed and can be scaled up to 300,000 CPU/cores with parallel efficiency of more than 30%

Budget: ~80 Million in RMB

- ✓ Fusion
- ✓ Aircraft Design
- ✓ Spaceship
- ✓ Drug Design
- ✓ Animation
- ✓ Mechanics of Giant Engineering Equipment
- ✓ Electromagnetic Environment Simulation
- ✓ New Type Material Design

Funding Agencies of HPC in China

- MOST – 863 Program (HW, SW & Apps)
- CAS – Informatization Project (HW, SW & Apps)
- NSFC – General projects (Apps)
- Ministries funding (SW)
- Local government funding (HW)

Chinese Academy of Sciences

- Informization Project (12th Five-year plan)
 - A several Petaflops supercomputer
 - Chinese Scientific Computing Environment
- Software Development Center
 - Goal - to improve computational efficiency in scientific computing and develop software systems
 - Application fields
 - Chemistry, Material Science, Mathematics, Climate, Fluid Dynamics, Bioinformatics, Drug Design, Geophysics and Astrophysics
 - Budget: ~ 30 million in RMB

中国科学院
计算机网络信息中心
Computer Network Information Center
Chinese Academy of Sciences

中国科学院超级计算中心
Supercomputing Center of Chinese Academy of Sciences

- Equipment for Earth System Simulation
 - Peak Performance: > 10 P
 - CPU: Godson (16 cores)
 - Budget: 1 Billion in RMB
 - Visualization system

Computer Network Information Center,
Chinese Academy of Sciences

中国科学院超级计算中心
Supercomputing Center of Chinese Academy of Sciences

NSFC

- Basic Algorithm and Computational Modeling for High Performance Scientific Computing
 - Highly Efficient Algorithm for Numerical Calculation
 - Computational Modeling based on mechanism and data
 - Evaluation on High performance computing and algorithm
- Duration: 2011~2015
- Budget: 37 Millions in RMB (2011)
- Projects: 25

中国科学院
计算机网络信息中心
Computer Network Information Center
Chinese Academy of Sciences

中国科学院超级计算中心
Supercomputing Center of Chinese Academy of Sciences

MOST

- High Performance Computing System toward Earth System Mode
 - ✓ Data integration and management
 - ✓ Fast visualization and diagnosis of data
 - ✓ Development of MPMD program
 - ✓ Development environment of earth system mode
- Budget: 31 Millions in RMB

Supercomputer for the Earth System Simulation

- Peak performance: 172TFlops
- CPU + GPU
- 8880 CPU/Cores
- Bandwidth: 40Gbps IB
- Storage: 1PB
- Power Consumption: <300KW

中国科学院
计算机网络信息中心
Computer Network Information Center,
Chinese Academy of Sciences

Supercomputing Center of Chinese Academy of Sciences

Sunway Bluelight

- National Engineering Center for Parallel Computer
- Developed for the National Supercomputing Center (Shandong), Jinan, China
- Peak performance of **Petaflops**
- Multi-core Processor designed by China
- Infiniband QDR 40Gbps
- Will be released on HPC China 2011 @Jinan (Next Month)

You are welcome to participate!

中国科学院
计算机网络信息中心
Computer Network Information Center,
Chinese Academy of Sciences

- Goal

- broad discussions on domain applications requiring extreme scale computing systems and the path to co-designs with petaflops supercomputers, the new challenge and opportunity ahead in the design and development of simulation software.

- Topics

- Finite element/generalized FEM/particle/meshfree methods, numerical simulation and software
- Parallel computing in engineering and science
- GPGPU accelerated numerical analyses
- Highly scalable numerical methodologies
- Fault tolerant numerical analysis
- Mixed precision scientific computing
- Real-time simulation and computational reality
- Experience and vision on petascale computing
